

Daniil Fedorov

Game Developer
Moscow, Russia adviventes@gmail.com +7 920 839-93-12

Summary

Game developer fluent in C++ and C#; experienced in proprietary C++ game engines and Unity, with strengths in locomotion, gameplay, animation, and AI systems.

Co-founded UwU Novels, raised $19K+ in seed funding, and built its Unity WebGL visual-novel engine, growing the platform to 500+ users.

Experience

Engine Programmer, Eagle Dynamics – Moscow, Russia Apr 2024 – present

- Maintained the animation-based locomotion system for NPCs in the simulator's custom engine.
- Implemented IK algorithms and developed AI systems including decision-making, pathfinding, and obstacle avoidance.
- Created a dedicated testing submodule and debugging tools for AI development and validation.

Co-Founder & Lead Engine Programmer, UwU Novels – Moscow, Russia Apr 2024 – July 2025

- Leading development of a no-code visual novel platform with a team of 3-5 developers.
- Built a custom Unity WebGL game engine using MVVM architecture; worked extensively with UniTask, UniRx, DOTween.
- Integrated with Yandex.Cloud services (S3, OAuth, serverless) and frontend (React.js).
- Set up CI/CD with Jenkins (local builds) and GitHub Actions (cloud microservices).
- Raised $19K+ in funding and reached 500+ registered users.
- Hosted our own game jam with 100 participants and 30 published visual novels.

Junior Gameplay Programmer, Saber Interactive – Remote Apr 2023 – Apr 2024

- Worked on a first-person title using an in-house game engine and a proprietary scripting language to implement animation-driven gameplay and locomotion.
- Developed a parkour module and animation-driven interactive props (doors, buttons, ledges).
- Fixed a critical animation bug deep in the engine core (C++).
- Wrote integration tests to validate complex animation/gameplay logic.
- Collaborated closely with QA and animators to polish motion flow and ensure smooth, immersive gameplay.

C++ Backend Programmer, Yandex – Moscow, Russia Nov 2021 – Apr 2022

- Maintained and extended a high-load C++ backend for the ads engine.
- Wrote unit tests in Python and SQL queries to validate test results and data integrity.
- Configured and monitored A/B tests to evaluate feature impact.

Education

Higher School of Economics, MEng in System and Software Engineering Sept 2024 – June 2026

Higher School of Economics, Bachelor in Software Engineering Sept 2020 – July 2024

Technical Skills

C++: ImGUI, OpenGL, CMake
C#: NUnit
Unity: Zenject, UniTask, UniRx, DOTween
Architecture: DDD, TDD, ECS, MVVM
Tools: Figma, Jira, Git, GitHub
Microservices: Yandex.Cloud, S3, Serverless, Auth

Languages

English (B2)
Russian (Native)
Belarusian (Native)

Certifications

TOEFL iBT 91/120 (Mar 2024)
